## Cover Photos

Sulfosulfuron provides good control of grassy weeds (*Phalaris minor* and *Avena ludoviciana*) in wheat, but is less effective on some broadleaf weeds viz. *Convolvulus arvensis*, *Malva parviflora* and *Rumex* species, where carfentrazone has its strength (inset, top right), but has only temporary setback to grasses (*P. minor*) (inset, bottom left). Tank or pre-mix of both sulfosulfuron plus carfentrazone provides good control of complex weed flora in wheat (Cover photo). For more information read article on page 146-149.
